

Dynabrade Premium Random Orbital Sanding Pads

**Dynabrade Sanding Pads Can Make
a Difference in Finishing Quality!**

**Ask for the
ORANGE!**

- Engineered for **top performance**. Actually helps **minimize vibration** on sanders.
- **Perfectly balanced** and **weight-mated** to Dynabrade tools for achieving consistent **swirl-free finishes**.
- Designed to last using **premium materials**.
- Priced competitively.

- Exclusive **SINGLE-PIECE Hub Design!**
- All pads have common **5/16"-24 male thread**.
- Fits many brands of sanders!
- **13,000 RPM maximum operating speed**.

PSA-Type

76006 5" Vacuum
76007 5" Non-Vacuum
76008 6" Vacuum
76009 6" Non-Vacuum

Hook-Face

76010 5" Vacuum
76011 5" Non-Vacuum
76012 6" Vacuum
76013 6" Non-Vacuum

Store Counter Display Pack

Each display pack consists of ten pads in a refillable Dynabrade display box. All pads are PSA-Type.

95994 5" Non-Vacuum
95995 5" Vacuum
95996 6" Non-Vacuum
95997 6" Vacuum

Dynabrade Premium Pad Facts:

Serious As Serious Gets About Quality...

- **Single-piece machined 5/16"-24 external threaded stud.** This is the foundation of the pad. We machine the stud to tolerances of .0015" (one and one-half thousands!) Many competitors have pads that are manufactured with a 2-piece design that leads to higher run-out. Fits other companies' sanders too.
- **Top washer** held to .0015" flatness – important for balance.
- **Fiberglass backing** is 100% inspected through a pass-through gauge to insure flatness before assembly.
- The **complete hub** is assembled and inspected for face run-out before going to foam molding. If the hub runs out – so will the pad!
- **Riveting** – we compress the unit flat; then rivet all 4 rivets simultaneously; other companies will rivet "one at a time" and end up twisting the pad.
- **Urethane foam** – Dynabrade uses a premium custom compounded urethane that will not shrink or curl; this adds to our premium quality.
- **PSA material** – there are many grades of vinyl. We use only high-quality that will not separate from its woven cloth substrate material used for dynamic strength.
- **Hook-face material** – We have top-quality J-Hook facing material. We use nylon, which has the highest temperature rating of all hook materials. Cheaper materials used by others are polyester and polypropylene.
- **Our weight and durometer (hardness) are highly controlled;** this ensures vibration levels are at their absolute lowest.
